MARKET REVIEW

Frontier emerging markets (FEMs) gained 1.7% in the first quarter, the fifth consecutive quarter of positive performance. Every FEM region except Asia advanced, while sector performance was mixed.

The escalating global trade dispute between the US and China appears unlikely to have major implications for FEM economies. For many of the countries, exports do not constitute a high proportion of GDP. In addition, FEMs often export natural resources, such as oil, and low-end manufactured goods, where they enjoy a competitive advantage due to low labor costs. As such, these exports are not typically targeted by protectionists who seek to shield their domestic industries.

For the quarter, Asia was dragged down by weakness in the Philippines, an index heavyweight. The Philippine peso depreciated almost 5% against the US dollar, reflecting concerns of a widening trade deficit and accelerating inflation, which climbed

Source: FactSet (as of March 31, 2018); MSCI Inc. and S&P. Selected countries are the 10 largest by weight, representing over 84% of the MSCI Frontier Emerging Markets Index.

to a three-year high in February. Both currency and local share prices were weak across banks, industrial conglomerates, and real estate. In Vietnam, a growing economy and generally solid corporate earnings powered market performance. Consumer products company **Masan Group** rallied, bolstered by anticipated growth from brand refreshes and product launches. Aiming to expand its reach, Masan introduced several sauce, noodle, and coffee products targeted to the premium segment of the market.

Europe was the best-performing region, led by Romania. Prime Minister Mihai Tudose's resignation in January did not derail Romania's expanding economy, which was stimulated last year by generous salary increases for public sector workers. **Banca Transilvania** posted solid earnings growth on increased lending—especially to households and small businesses—and higher fee income. In late 2017, the bank agreed to acquire competitor Bancpost, which will give it the largest share of loans and deposits in Romania. In Kazakhstan, **Halyk Savings Bank** reported accelerating loan demand, mainly from its corporate customers, and profit growth fueled by its takeover of competitor Kazkommertsbank in 2017.

Africa's markets also rose this quarter, mainly on the strong performance of Kenya, Nigeria, and Egypt. In Kenya, the charged political climate after last year's disputed election normalized with the reconciliation of President Uhuru Kenyatta and opposition leader Raila Odinga. Nigeria advanced as the economy returned to growth after contracting in 2016 and most of 2017. Higher oil revenue, increased investments, and sales of dollar-denominated government bonds helped lift Nigeria's foreign exchange reserves to a four-year high of almost US\$42 billion.¹ The greater supply of hard currency helped stabilize the Nigerian naira's exchange rate and allowed local companies access to dollars needed to import machinery and raw materials. In Egypt, the presidential election ended predictably as incumbent president Abdel Fattah el-Sisi, who was virtually unchallenged, secured another term in office, signaling policy continuity. Egypt's ongoing economic recovery is discussed later in this report.

Latin American markets rose modestly as advances in Peru and Colombia outweighed a decline in Argentina. In Peru, President Pedro Pablo Kuczynski's resignation was welcomed by investors who believe his replacement, First Vice President Martín Vizcarra, will have a more constructive relationship with the National Assembly. Politics aside, Peru's economy remains strong, with low public debt, a stable currency, low inflation, and accelerating growth. Colombia owed its gains primarily to oil and gas producer **Ecopetrol**. Increased production and ris-

Companies held in the portfolio during the quarter appear in bold type; only the first reference to a particular holding appears in bold. The portfolio is actively managed therefore holdings shown may not be current. Portfolio holdings should not be considered recommendations to buy or sell any security. It should not be assumed that investment in the security identified has been or will be profitable. To request a complete list of holdings for the past year, please contact Harding Loevner. A list of the ten largest holdings at March 31, 2018 is available on page 6 of this report.

ing oil prices boosted Ecoptero's revenue, while a cost-savings program and lower debt improved its profit margin.

The Gulf States region gained largely due to the strength of Kuwait, where **National Bank of Kuwait (NBK)** was the top performer. Given its sizable balance sheet and strong relationships with large local contractors, the bank is poised to grow its loan book as government spending on megaprojects increases. Its profitability also should be helped by rising interest rates.

By sector, Financials rose due to the strength of shares of Halyk Savings Bank, NBK, and Banca Transilvania. Energy shares posted positive returns in the quarter. Global oil producers, led by Saudi Arabia and Russia, extended last year's deal to cut oil production to the end of 2018. The Materials sector also advanced, helped by the strong performance of Vietnamese steel producer **Hoa Phat Group** and Nigerian cement company **Dangote Cement**. Hoa Phat, which continues to post strong profit gains from double-digit volume growth, is expanding its capacity to take advantage of solid domestic demand for steel. We further discuss Hoa Phat later in this report. Dangote Cement reported strong earnings growth after last year's price increases and expected demand from Nigeria's infrastructure programs in 2018. The Real Estate sector declined, dragged down by Philippine and Moroccan real estate developers.

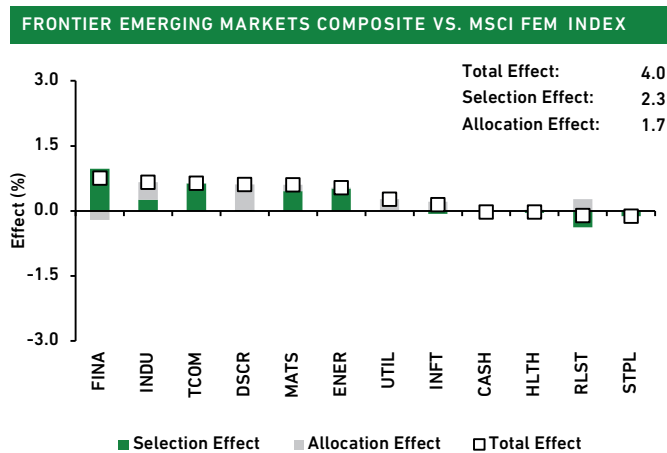

■ PERFORMANCE AND ATTRIBUTION

The Frontier Emerging Markets composite gained 5.8% in the quarter, outperforming the MSCI FEM Index's 1.7% rise. The charts to the right attribute the quarter's performance by sector and region.

Viewed by sector, our stock selection was strongest in Financials, which was led by Halyk Savings Bank. Our stock selection in Materials was also strong, led by Vietnam's Hoa Phat Group. Our poor selection in Consumer Staples was a detractor. **Olympic Industries**, a Bangladeshi consumer goods producer, had deteriorating sales growth in its baked goods segment.

By geography, our stock selection in Asia, particularly in the Philippines, was the main source of our outperformance. Philippine restaurant chain operator **Jollibee Foods** reported strong 2017 results, including a 7% increase in same-store sales and a 9% increase in sales from new restaurants. The stock was also lifted by Jollibee's plan to purchase a controlling stake in US restaurant chain Smashburger. In Latin America, stock selection in Argentina contributed to our outperformance, as technology consultant **Globant** had strong revenue growth mostly from existing customers. Our allocation to off-benchmark investments in the United Arab Emirates detracted the most from relative returns. **Emaar Properties** and **DP World** reported solid fundamental results but disappointed investors with news of

SECTOR PERFORMANCE ATTRIBUTION FIRST QUARTER 2018

a lower-than-expected dividend yield and guidance of weaker margins in 2018.

■ PERSPECTIVE AND OUTLOOK

In a number of frontier markets, governments have adopted business-friendly policies that strengthen the foundation for economic growth. One example is Egypt. In less than two years, it has significantly changed its policies to create an environment friendly to foreign investment. While Egypt's journey is by no means over, we believe the country has taken the right steps to promote a sustainable recovery and long-term growth that creates attractive investment opportunities.

¹ David Malingha Doya, "Charts Show Why Nigeria's 2018 May Even Exceed the 2017 Rebound," Bloomberg, February 27, 2018.

For five years after the onset of the Arab Spring in 2011, the Egyptian economy languished. The threat—and occasional reality—of terrorist activity spilling over from conflicts in Syria and Iraq caused the number of foreign tourists—an important source of hard currency—to drop from 14 million in 2010 to 5 million in 2016. Foreign investors were deterred by a burdensome regulatory environment, restrictive capital controls, and an uncertain growth outlook. Foreign direct investment, which from 2000–10 amounted to an average of 4% of GDP annually, declined to only 2% in 2014–17.² An overvalued exchange rate for the Egyptian pound made the country's exports uncompetitive, further reducing already-low foreign exchange reserves.

In late 2016, Egyptian authorities, working with the IMF, took decisive steps to encourage private investment and stimulate growth. Key reforms included the abolishment of capital controls and the introduction of a free-floating exchange rate regime for the Egyptian pound. These measures eliminated distortions in the foreign currency market and helped boost exports, resulting in a steady and sustainable supply of foreign currency. By February 2018, foreign currency reserves had reached over US\$42 billion—the highest in five years.

Key reforms in Egypt have included the abolishment of capital controls and the introduction of a free-floating exchange rate regime for the Egyptian pound.

At Harding Loevner, we invest only in high-quality and growing companies. These businesses are not immune to external risks, of course, but their strong competitive advantages, robust balance sheets, and skilled managers make them more resilient to shocks from any number of directions. Our holdings in Egypt include a bank and a medical testing company, and each is poised to benefit as Egypt's recovery accelerates.

Commercial International Bank (CIB), Egypt's largest private sector bank, stands to benefit from rising demand for loans and banking services. The free-floating pound and the elimination of capital controls cleared the backlog of foreign currency requests, allowing local producers to import machinery and equipment from abroad by borrowed US dollars from CIB and other banks instead of the black market. In addition, authorities cut interest rates after inflation dropped from 31% in October 2017 to 14% in February 2018. As the only privately owned bank in Egypt without a foreign parent, CIB can grow faster than many of its competitors, whose parent companies impose growth restrictions on their Egyptian subsidiaries.³ CIB's other advantage is its low funding cost: cheap, sticky current and savings deposits, sourced through payroll accounts, comprise over 40% of its deposit base. With a loan-

to-deposit ratio of only 35%, CIB has ample room to expand lending without having to mobilize additional deposits.

As the only privately owned bank in Egypt without a foreign parent, Commercial International Bank can grow faster than many of its competitors, whose parent companies impose growth restrictions on their Egyptian subsidiaries.

As Egypt's economy picks up speed, more companies are operating close to their full capacity, necessitating further investments in plants and equipment. Lending is shifting from short-term working capital and trade financing to longer-term loans and is accelerating. CIB, which has one of the strongest corporate lending franchises in the country, is capitalizing on this trend.

While corporate lending has traditionally been a pillar of CIB's growth, the bank has recently turned its attention to lending to consumers. Retail offers significant growth potential in Egypt: the country is under-banked, with household loans comprising only 7% of GDP. As interest rates decline and Egypt's economic recovery accelerates, more consumers will be able to access credit, and many will do so through CIB.

Consumption, which remains the primary driver of Egypt's economy, declined last year when inflation spiked. Many Egyptians curbed spending even on essentials, such as food and health care. As inflation decelerates and consumers gradually adjust to higher prices, consumption is gradually recovering. Improved consumer purchasing power is supporting growth in the health care services sector. **Integrated Diagnostics Holdings (IDH)**, the largest private lab diagnostic company in Egypt, has built a trusted brand over its 40 years in operation among patients and doctors. Egypt has a high prevalence of lifestyle diseases such as obesity, diabetes and hypertension, yet it has one of the lowest levels of tests per capita, suggesting solid long term-growth potential for IDH. Few competitors can match the company's expertise in performing highly complex tests. IDH's lab footprint of over 300 branches makes it the only company able to serve corporate and government employees nationwide. This proved critical in 2017 as more patients migrated from private-pay to institutionally sponsored health plans with unions and large corporations.

Recognizing that high inflation hits patients who pay for health care out of pocket the hardest, IDH developed innovative marketing programs that resulted in cost savings for customers. For example, the company now offers bundles of tests at a discount for patients with specific conditions. In the past, the patients had to purchase each test separately. IDH also partnered with a bank to offer more-affordable payment plans. These initiatives ensured continued growth in patient volumes and revenues in 2017, even in the face of restrained

² "Arab Republic of Egypt: Selected Issues," International Monetary Fund, December 11, 2017.

³ Egypt's non-investment grade sovereign credit rating means these subsidiaries weaken their companies' regulatory capital ratios.

spending by consumers. IDH has weathered challenging conditions well—a testament to the skill of its management team.

■ PORTFOLIO HIGHLIGHTS

During the quarter, we established a position in **Telecom Argentina (TA)**, the country’s leading provider of fixed-line, broadband, and mobile telecom services. We believe Argentina’s improving regulatory landscape and TA’s strengthening competitive position will help it gain market share and profits.

TA has a broad subscriber base in wireless (20 million users), fixed-line telephones (4 million), and internet access (2 million). The company’s average revenue per user in the mobile segment exceeds its competitors’, América Movil and Telefónica, mainly due to TA’s wireless brand, Personal, which caters to premium wireless customers who consume more voice minutes and data than average.

TA’s growth was hindered for years by government regulations. During the administrations of former presidents Néstor Kirchner and Cristina Fernández de Kirchner, the government froze telephone rates for 15 years even though inflation exceeded 25% per year. As a result, TA underinvested in network upgrades that would have improved the data transmission speeds for the phone company’s broadband subscribers.

The regulatory disadvantage ended in 2015, when newly elected president Mauricio Macri began to lift price caps on fixed-line phone rates. The administration also mapped out a plan to remove restrictions that prevented phone companies from offering pay television (“pay TV”) services, starting in 2018. To deliver pay TV, phone companies need faster networks that match the speed and quality of cable TV providers. Aiming to gain a first-mover advantage, TA merged with Cablevisión, Argentina’s dominant pay TV and broadband provider with 32% market share. Cablevisión’s network footprint covers 56% of homes in Argentina and can carry high-definition TV at high speeds, but, unlike TA, it lacks a sizable wireless subscriber base. The combined company is Argentina’s only truly integrated, multi-platform operator that can offer the quadruple-play bundles—mobile, fixed-line voice, broadband, and pay TV—that are increasingly popular. The company’s prodigious cash flow affords it the financial wherewithal to upgrade its network without incurring significant additional debt.

As Telecom Argentina illustrates, changes in a company’s competitive position that improve its growth outlook will prompt us to reconsider it. Changes might be triggered by a government policy shift, an acquisition, or an industry consolidation.

Recent headlines have been dominated by US president Donald Trump’s tariffs on steel, aluminum, and other products. Other countries—including China—have vowed to retaliate. While it remains to be seen how the trade dispute will play out, we do not believe it will have a significant impact on our holdings, including our only steel producer, Hoa Phat Group.

Hoa Phat is the leading construction steel manufacturer in Vietnam, with 25% market share. The company operates predominantly in the domestic market. While some other Vietnamese steel companies import raw materials from China, Hoa Phat is not dependent on Chinese imports; it sources a large part of its raw materials within Vietnam. Its total exports hover around 20%, the largest share of which is directed to neighboring Southeast Asian countries, where demand is growing fast. The company exports minimally—less than 2% of total volumes—to the US. For this reason, we expect the impact of the US-China trade dispute on Hoa Phat will be very limited.

While it remains to be seen how the US-China trade dispute will play out, we do not believe it will have a significant impact on our holdings.

Vietnam’s rapid urbanization is generating demand for residential housing and infrastructure, while rising investment flows are fueling growth in the country’s manufacturing sector. The activity translates into robust demand for steel. Hoa Phat continues to post solid profitability gains and is expanding capacity to take advantage of the solid domestic demand outlook for steel.

Hoa Phat’s strong growth has been rewarded by the market, with its shares appreciating by over 25% in the first quarter. As the shares continued to rally, we reduced our position slightly to comply with our portfolio guidelines, which set a maximum size per holding of 5% of the portfolio’s total weight.
