

Spending on cybersecurity is growing rapidly as companies seek to defend themselves against attacks that are increasing in number and sophistication. The research firm IDC estimates that spending will reach US\$103 billion globally this year, up 9% from 2018. Securing the enterprise has also become increasingly complicated. Numerous firms have sprung up offering security technology to address specific individual threats, such as ransomware, phishing, mobile device security, and Internet of Things (IoT) vulnerabilities. Customers are overwhelmed by proliferating product choices and the complexity of integrating the security solutions of multiple vendors.

**Check Point**, an Israel-based cybersecurity company, was a pioneer of firewalls, a fundamental cybersecurity component that blocks outside attacks and keeps sensitive information within private networks. Since the 1990s, it has built a thriving business helping corporate and retail customers secure their computers and networks. In recent years, Check Point has acquired numerous specialized cybersecurity companies and incorporated their technologies into a suite of integrated products, encompassing cloud security, compliance and governance automation, and event analysis. Check Point's most recent solution is Infinity, a subscription-based software service that protects its customers' local and cloud-based data centers, sparing them from having to manage numerous security products and vendors.
