MARKET REVIEW

Stocks of international small companies plummeted 14% in the quarter amid concerns that the global economy is faltering. For the full year, small-cap equities outside the US fell 18%, the steepest annual decline since 2011. Rate hikes by the US Federal Reserve, a trade war instigated by the US, and slowing economic growth in China sparked a flight to safety by global investors, with bond markets outperforming stocks, developed equity markets outperforming developing, and large-cap stocks outperforming small.

The Fed indicated in October that it planned more short-term interest rate hikes if economic data was supportive and in December it duly delivered its ninth quarter-point rise. However, long-term Treasury yields fell, flattening the US yield curve. That and widening credit spreads in global bond markets suggested investors foresaw an end to the economic expansion. A precipitous decline in crude oil prices reinforced that suggestion. Fears of a slowdown had a pronounced effect on equities, particularly US small caps, which were sporting high valuations on the prospect of continued strong growth. After outperforming for much of 2018, US small companies trailed their larger peers by six percentage points at the end of the year.

In addition to the effects of the trade war, the Chinese economy is reeling from the government's efforts to deleverage.

Source: FactSet (as of December 31, 2018); MSCI Inc. and S&P.

China's Purchasing Managers' Index (PMI) dropped to 49.4 in December, nearing its lowest levels since the global financial crisis. Retail sales growth also decelerated to its lowest level since 2003.

In Europe, where economic indicators are bleaker, equity markets underperformed; small caps inside and outside the European Monetary Union (EMU) were among the worst performing in the index, each declining by about 18%. Protests in France have closed stores and scared away tourists, and Italy's Euroskeptic populist government is threatening the stability of its own financial system, as well as the long-term viability of the European Union (EU). The EU is scheduled to become significantly smaller on March 29, when the UK is set to leave, but there is still no agreed-upon framework for Brexit. The uncertainty is weighing heavily on the UK economy as consumers and businesses delay major purchases and investments. Germany is also struggling, in part due to weakness in the automotive market. New testing requirements for vehicles have increased costs and slowed production, which hurt both car manufacturers and the smaller companies in their supply chains.

Emerging Markets (EMs) performed best in the quarter. Small caps in Brazil returned 23% in US dollar-terms in the wake of Jair Bolsonaro's victory in the presidential election. The new president has outsourced management of the struggling Brazilian economy to former banker and economist Paulo Guedes. Investors are hopeful that the new administration will crack down on the country's widespread corruption and reform its overburdened pension system.

By sector, small caps in Energy were by far the worst performing, falling 30% in the quarter. The price of oil fell 36% in the period as investors worried about increasing supply from top producers, including the US and Russia, and declining demand from a slowing global economy. Information Technology (IT) fell by 18%. As with their large cap IT counterparts, small-cap IT stocks had been among the best performers in 2017 and 2018 but sold off sharply in the recent market downturn.

For the year, all sectors were negative, but Real Estate outperformed, falling just 7%. This was largely due to Japan, where small-cap Real Estate stocks gained 5%. The commercial real estate market in Tokyo performed very well, as vacancies slid below 2% for the first time since 1991. Energy was the worst-performing sector, falling 24% alongside the declining oil price.

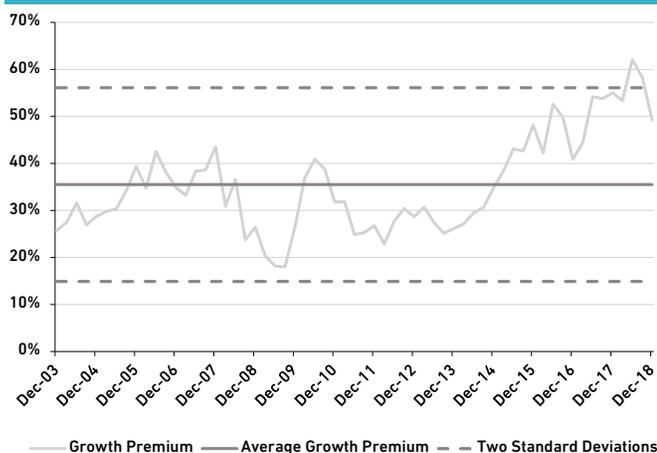

Japan was the best-performing major region in 2018. The Japanese yen is viewed as a safe haven during periods of market distress, and it outperformed nearly all other index currencies by holding flat with the US dollar through the year. Europe

Companies held in the portfolio during the quarter appear in bold type; only the first reference to a particular holding appears in bold. The portfolio is actively managed therefore holdings shown may not be current. Portfolio holdings should not be considered recommendations to buy or sell any security. It should not be assumed that investment in the security identified has been or will be profitable. To request a complete list of holdings for the past year, please contact Harding Loevner. A complete list of holdings at Decemehr 31, 2018 is available on pages 6-7 of this report.

EMU was the worst region due to Germany's and France's slowing economies.

During the market's steep fourth-quarter decline, slower-growing companies with cheaper share prices held up best. The underperformance of the faster-growing companies was in part tied to valuation. Over the last five years, the premium afforded to growth stocks expanded significantly and reached an all-time high in the second quarter of the year, as seen in the chart below. The sell-off of growth stocks was particularly acute in the index's two largest markets, Japan and the UK, where growth stocks had fared very well in recent years.

TRAILING P/E PREMIUM OF MSCI ACW EX-US SMALL CAP GROWTH INDEX VS. MSCI ACW EX-US SMALL CAP VALUE INDEX

Source: FactSet. Data as of December 31, 2018. MSCI Inc. and S&P; P/E: Price-to-earnings.

PERFORMANCE AND ATTRIBUTION

The International Small Companies composite fell 16.5% in the quarter, worse than the benchmark's 14.4% decline. For the full year, the composite lost 16.4%, outperforming the benchmark's 17.9% drop. The charts to the right attribute the year's performance by sector and region.

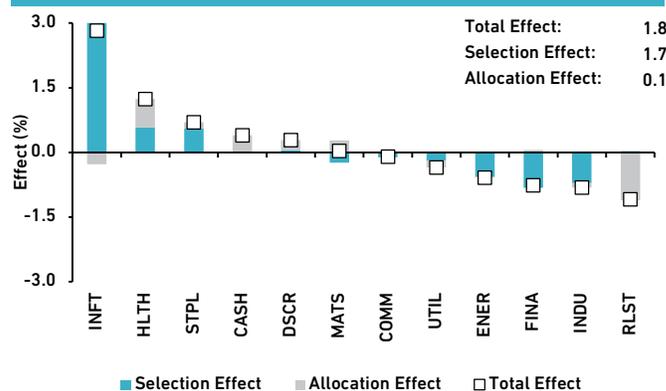

In the quarter, poor stock selection in the UK and Japan hurt our relative performance. In the UK, shares of aerospace supplier **Senior** fell after management forecasted lower-than-expected margins. The company has increased its sales for popular new airplanes like Boeing's 737 MAX, but startup costs associated with the new business is compressing margins, at least in the short term. **Nostrum Oil & Gas**, which is based in Kazakhstan but listed on the London Stock exchange, also detracted from our UK returns. The company's oil production was lower than expected due to flooding issues in some of its wells. In Japan, ingredients manufacturer **Ariake** sold its highly profitable US business, surprising investors who viewed it as a long-term growth opportunity for the company. Though disappointed in the sale, we believe the price was fair. Our investment thesis remains intact, thanks to the company's Chinese operations, which are growing faster than those in the US.

By sector, our underweight in Real Estate hurt our relative performance in the quarter. We have identified few quality, growing businesses in this sector, where companies tend to have high levels of debt and low growth. Our overweight in IT, where we find many more companies that meet our investment criteria, also detracted as demand weakened for semiconductors, dampening sentiment for many tech companies. Our good stock selection in Financials partially offset the negative allocation effects. Revenues of the India-based insurer **Max Financial** grew 17%, exceeding investors' expectations. The company reported that it has increased sales of its life insurance policies.

For the year, the strength of our IT stocks more than offset the impact of our significant underweight to the outperforming Real Estate sector. Over two-thirds of our IT weight is in the software and services industry group, which fared better than the index as a whole and much better than the rest of

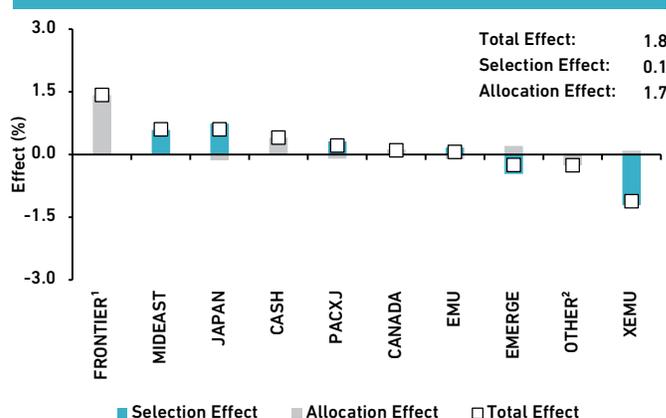

SECTOR PERFORMANCE ATTRIBUTION TRAILING 12 MONTHS

INTL SMALL COS COMPOSITE VS. MSCI ACW EX-US SMALL CAP INDEX

GEOGRAPHIC PERFORMANCE ATTRIBUTION TRAILING 12 MONTHS

INTL SMALL COS COMPOSITE VS. MSCI ACW EX-US SMALL CAP INDEX

¹Includes countries with less-developed markets outside the Index; ²Includes companies classified in countries outside the Index. Source: FactSet; Harding Loevner International Small Companies Composite; MSCI Inc. and S&P. This information is supplemental to the Composite GIPS Presentation.

the IT sector. Security software firm **CyberArk** was a standout performer. In November, the Israeli company reported that its revenues increased 31% year-over-year and its operating margins rose by 3.7 percentage points.

By region, our exposure to Frontier Markets—especially Argentina—helped our performance in the quarter and for the year. Though the country is in the midst of an economic crisis, its market outperformed as panic selling subsided. Cement manufacturer **Loma Negra**, which we purchased in July, supported the portfolio's relative returns.

Despite detracting from fourth-quarter performance, our stock selection in Japan was additive for the year. **Infomart**, an e-commerce company that serves the restaurant industry, was a standout 2018 performer. The company reported that its operating profits surged 28% as its investments in online-invoicing software paid off. Our poor stock selection in Europe ex-EMU, especially in the UK, offset some of these gains. Senior and Nostrum were also notable detractors for the year.

■ INVESTMENT PERSPECTIVES

When the UK voted in June 2016 to leave the EU, nobody denied that the divorce would be a risky, confusing, and complicated affair. But as the March 29 deadline for separation approaches, investors hoping for any clarity about the outcome have only been disappointed. The best chance for an orderly “Brexit” seemed to expire in December, when Prime Minister Theresa May's deal with the EU was pulled before Parliament could reject it. As of this writing, no outcome can be called impossible, from a “hard Brexit” in which the UK leaves with no agreements to a second referendum that could lead to no Brexit at all. While politicians attempt to reach a resolution, company managements are left to prepare for an unknown outcome that might—or might not—end the free movement of labor, goods, services, and capital between the UK and the EU, its largest trading partner.

Over the years, we have found the UK a fertile hunting ground for the quality, growing smaller companies that we seek for our portfolio. The British economy has benefited from its relationship with the EU. We are not top-down investors and are making no prediction about the ultimate outcome of Brexit negotiations and votes. But we are not ignoring developments out of London or Brussels, either. Should the UK leave the bloc without a deal, there is little doubt that the ensuing disruption will impair the profitability of all British and European companies, including small ones. Specifically, we are thinking about how our companies might be affected by slowing overall growth in the UK and Europe, by the disruption of trade by bottlenecks in logistical networks, and by changes in customs agreements that impact labor availability and cost. The possible response of the British pound to each scenario also figures in our ruminations.

Roughly 14% of our portfolio is invested in the UK, more than in any other country.¹ The average direct revenue exposure of

our UK holdings to their domestic market is only about 40%, but nine other portfolio holdings outside the UK have 5% or more revenue exposure to the UK market.

Two of our largest UK investments are health care companies that derive most of their revenues from exports. Because of this, **Abcam**, a manufacturer of antibodies used in pre-clinical research, and **Dechra Pharmaceuticals**, a manufacturer of veterinary pharmaceuticals, are directly exposed to the risk of a disruption to logistics networks, which could severely impair their ability to get products to customers. In both cases, the companies are bulking up capabilities in other markets; Dechra is investing in new facilities outside the UK, while Abcam is building up inventory in its existing offshore facilities. For both companies, a hard Brexit has one potential upside: a weaker pound would reduce their costs and allow them to price their products more cheaply in other markets, boosting sales. We expect demand for antibodies and veterinary pharmaceuticals to grow in the longer term regardless of which Brexit scenario materializes, and the strong competitive positions that these companies enjoy in their respective niches are not likely to change.

A weaker pound obviously is not good for all companies. While we spend no time forecasting unpredictable currency movements, we are cognizant of how such movements would impact the results of our companies. **Britvic**, a beverage manufacturer and distributor headquartered in Hertfordshire, is the most perilously exposed to a collapse in the pound. In contrast to our health care companies, roughly 60% of Britvic's revenues come from the UK. Making matters worse, roughly a third of the costs in its UK operations are paid in euros (for raw materials supplied from Europe), creating a dangerous currency mismatch. While the company has hedged this currency exposure using derivatives, they will postpone the pain of a hard-Brexit scenario only for a while. Britvic could also face considerable logistics challenges if Britain's new trading arrangements make it more difficult to import supplies from Europe. To mitigate this risk, Britvic is stocking up on supplies, which will lead to higher costs over the short-term. Britvic is an extremely durable business with an extensive distribution infrastructure and strong portfolio of brands that have been around since 1845. We think these risks of consequences of a bad Brexit, while substantial, are adequately reflected in Britvic's current share price and we have maintained our position.

Non-UK companies that do business in the country are another source of Brexit exposure in the portfolio. Italy's **Reply** is one such company. It has a network of small subsidiaries, including one in the UK, focused on providing technology services to business clients. One Brexit-related risk for Reply is that an end to the free movement of labor, and potentially stricter immigra-

¹The model portfolio held an end weight of 15.3% in the UK as of December 31, 2018. This number includes two frontier market companies that are listed on the London Stock Exchange. Excluding Bank of Georgia (0.9%), and Nostrum Oil & Gas (0.5%) yields a weight of 13.9% UK companies, which is the largest country weight in the portfolio, followed by Japan (13.0%), and Germany (11.9%).

tion controls, impairs its ability to use EU workers in the UK, and vice versa. Management has highlighted that enterprise and cyber security software are important growth drivers in the UK specifically, and expects the country to represent up to 15% of revenue over time. On the other hand, Brexit could actually be a boon for Reply, as a new trading arrangement with the EU, and possibly other countries, would create extensive work re-configuring IT systems for new routing, sourcing, customs, and tax information, potentially boosting our already solid revenue growth expectations for the company.

■ PORTFOLIO HIGHLIGHTS

During the quarter, we sold only one UK holding, and for a reason unrelated to Brexit. London-based insurer **Jardine Lloyd Thompson** is being acquired by Marsh & McLennan at a 34% premium. With no other bids expected, we exited our position and used the proceeds to buy other quality-growth companies, such as **Nihon M&A Center Inc.**, a Tokyo-based financial advisor that connects potential buyers of businesses with potential sellers. Nihon M&A focuses on advising small companies, and is three times larger than its closest competitor in this segment. This scale provides multiple advantages: a platform with a wider range of transaction choices for buyers and seller, as well as the ability to provide better quality of service while maintaining higher profitability. Nihon M&A also maintains the largest proprietary database on small company M&A activity in Japan.

We also sold two expensive-looking securities in small developing markets—Bangladesh’s **Brac Bank** and Kenya’s **Equity Bank**—in exchange for a more attractively priced holding in India’s largest wireless tower operator, **Bharti Infratel**. Bharti Infratel builds and manages a network of 92,000 telecom tow-

ers and related communications infrastructure across all of India’s 29 states, and leases space to wireless telecom operators—including Bharti Airtel, Vodafone-Idea, and Jio Communications—under contracts that typically range from 10 to 15 years. The merger of two of the company’s largest customers, Vodafone and Idea, resulted in a consolidation of the antennas and wireless equipment on Infratel’s towers and, consequently, a decline in leases in the third quarter. We saw the subsequent fall in share price as a good opportunity to invest, as we think this is only a short-term setback. We expect Infratel’s revenues to recover quickly as telecom operators lease more tower space to meet the requirements of serving growing numbers of smartphone users in India, where penetration remains relatively low, and deploying faster data networks. In fact, another 100,000 towers are needed just to meet current demand, according to the Tower and Infrastructure Providers Association of India.

With these transactions, our portfolio’s exposure to developing markets remains near our self-imposed ceiling of 30%.

¹Benchmark Index; ²Variability of the Composite and the Index returns over the preceding 36-month period, annualized; ³Asset-weighted standard deviation (gross of fees); ⁴The 2018 performance returns and assets shown are preliminary; ⁵N.M.—Information is not statistically significant due to an insufficient number of portfolios in the Composite for the entire year; +Less than 36 months of return data.

The International Small Companies Composite contains fully discretionary, fee-paying accounts investing primarily in non-US equity and equity-equivalent securities of companies with market capitalizations that fall within the range of the Composite's benchmark index and cash reserves. For comparison purposes, the Composite is measured against the MSCI All Country World ex-US Small Cap Total Return Index (Gross). Returns include the effect of foreign currency exchange rates. The exchange rate source of the benchmark is Reuters. The exchange rate source of the Composite is Bloomberg. Additional information about the benchmark, including the percentage of composite assets invested in countries or regions not included in the benchmark, is available upon request.

The MSCI All Country World ex-US Small Cap Index is a free-float market capitalization index that is designed to measure small cap developed and emerging market equity performance. The Index consists of 46 developed and emerging market countries, and is comprised of companies that fall within a market capitalization range of USD 96-8,807 million (as of December 31, 2018). You cannot invest directly in this Index.

Harding Loevner LP claims compliance with the Global Investment Performance Standards (GIPS[®]) and has prepared and presented this report in compliance with the GIPS standards. Harding Loevner has been independently verified for the period November 1, 1989 through September 30, 2018.

Verification assesses whether (1) the firm has complied with all composite construction requirements of the GIPS standards on a firm-wide basis and (2) the firm's policy and procedures are designed to calculate and present performance in compliance with GIPS standards. The International Small Companies Composite has been examined for the periods January 1, 2007 through September 30, 2018. The verification and performance examination reports are available upon request.

Harding Loevner LP is an investment adviser registered with the Securities and Exchange Commission. Harding Loevner is an affiliate of Affiliated Managers Group, Inc. (NYSE: AMG), an investment holding company with stakes in a diverse group of boutique firms. The firm maintains a complete list and description of composites, which is available upon request.

Results are based on fully discretionary accounts under management, including those accounts no longer with the firm. Composite performance is presented gross of foreign withholding taxes on dividends, interest income and capital gains. Past performance does not guarantee future results. Policies for valuing portfolios, calculating performance, and preparing compliant presentations are available upon request.

The US dollar is the currency used to express performance. Returns are presented both gross and net of management fees and include the reinvestment of all income. Net returns are calculated using actual fees. Actual returns will be reduced by investment advisory fees and other expenses that may be incurred in the management of the account. The standard fee schedule generally applied to separate International Small Companies accounts is 1.00% annually of the market value up to \$20 million; 0.80% of amounts above \$20 million. Actual investment advisory fees incurred by clients may vary. The annual composite dispersion presented is an asset-weighted standard deviation calculated for the accounts in the composite the entire year.

The International Small Companies Composite was created on December 31, 2006.
